OXIDIZING BLEACH FOR CLEANING SOLUTION BOOSTING AND PROBLEM SPOT REMOVAL AND STAIN TREATMENT

COFFEE/STAIN REMOVER

WHAT IS IT?

FORMULA "OBB" is a powder oxidizing bleach designed to be used as a boosting agent to be added to your regular cleaning chemicals on exceptionally soiled light colored nylon, olefin, and polyester carpet. It can also be used in removing and treating problem spots and stains as a spotting agent. Because FORMULA "OBB" is a bleach, there is always the possibility of causing color loss to the fabric. Please test carpet for colorfastness before use.

WHAT DOES IT DO?

It is a powerful boosting agent when added to your regular cleaning solutions. It makes the chemical more active and increases the pH of the cleaning solution. It lightens or removes the discoloration caused by the natural or additive dyes in the beverage through the active oxidizing bleach that it becomes upon mixing with water.

HOW DOES IT WORK?

It is especially effective to remove the last traces of oxidized oils that can cause lighter colored fabrics to discolor to a yellowish appearance. It does this by effectively treating or removing the oils themselves. The bleaching effect removes the foreign dye or stain. It can effect the dye structure of the fabric itself.

WHEN SHOULD I USE IT?

Use FORMULA "OBB" as a boosting agent when cleaning light colored synthetic carpets, especially olefin carpets whose appearance level has not been adequately restored with normal cleaning solutions. FORMULA "OBB" should only be used as

a last resort for removing foreign stains and dyes which could not be removed by safer procedures. It can safely and effectively be used on almost any synthetic carpeting. However, pretesting on all fabrics is essential, as dye loss may occur.

HOW DO I USE IT?

Always pretest the carpet for colorfastness before use. As a boosting agent for cleaning solutions, it can be used in three different mixtures. When boosting a preconditioning agent/traffic lane cleaner, mix one ounce of powder solution per gallon of properly mixed pre-conditioner. On Olefin carpets with discoloration problems, mix one ounce of chemical with mixed gallon of OLEFIN PLUS TLC. For boosting detergent rinse cleaning solutions for portable extraction detergent, mix one ounce of powder solution per mixed gallon of carpet extraction detergent. For boosting truck mount carpet extraction detergent, mix one to four ounces of powder with cleaning solution concentrate. Set solution flow meter on 2-3. Dispose of any mixed solution that is not used within 7 days. As a spot removal or stain treatment chemical, mix one ounce of powder solutions with 32 ounces of warm water in a trigger sprayer. Lightly mist onto area and allow to dwell for 10-15 minutes. Thoroughly rinse area. Use mixed solution within 24 hours. Dispose of any unused portion properly.

WHAT IS IN IT?

Sodium Perborate

WHAT PRECAUTIONS SHOULD I USE?

Use only in well ventilated areas! Do not inhale powder. Can cause serious breathing difficulties. Do not allow to contact metal surfaces. THIS CHEMICAL SHOULD ONLY BE USED BY TRAINED PERSONNEL.

Do not swallow, inhale, or ingest. KEEP OUT OF REACH OF CHILDREN AT ALL TIMES. Avoid skin and eye contact. Professional chemicals should always be under the complete control of the technician at all times.

PLEASE READ THE MATERIAL SAFETY DATA SHEET BEFORE USING THIS PRODUCT.

WHAT SIZE CONTAINERS ARE AVAILABLE?

FORMULA "OBB" is available in one and one-quarter pound jars and cases of twelve - one and one quarter pound jars from your local Steam Way® Distributor or call 1-800-447-8326.
